Recorder Accessories

With voice recorders being one of the most important types of spy equipment, it goes with saying that accessories can also prove to be of high worth.

Essential Recording Extras

Audio evidence gathering equipment sometimes needs a helping hand. In this section we list a number of important accessories for our voice recorders. Some maybe to extend the deployment capabilities, whereas others are to supplement and thereby add value to their use. We are always being told to accessorise, so check out what we have to offer in the Recorder Accessories section because you might just find something that can extend the capabilities of your current recording solution.

External Battery Pack for Digital Voice Recorder Pro

This is an external battery (holder) pack for the Digital Voice Recorder Pro and landline version of this recorder. Using an external battery pack enables longer performance, in a stand-alone situation, without the need for mains power.

Product Code: BAT1

£8.29 (exc. VAT) £9.95 (inc. VAT)

This is an external battery pack for the Digital Voice Recorder Pro and landline version of this recorder. Using an external pack will increase the deployment period of the recorder where mains power is not an option.

Extend Deployment Times

Using this pack widens scope for deployment possibilities. Normally using a standard battery in the recorder would limit the straight recording time, but by using an external battery pack especially when using lithium ion batteries in the pack, will dramatically increase the deployment period. This results in being able to exploit the recorders memory capacity with the need for connection to a mains power supply, which in some situations is either not possible or undesirable.

Designed to Take AA Batteries

The pack uses a wired connection with a USB connector. This can be connected to the USB lead that is already provided with the recorder package, which in turn connects to the headphone socket of the recorder thereby getting an external power feed to the recorder. The battery pack takes 4 x AA batteries (not supplied). Typically, using standard alkaline batteries will ensure that the voice recorder unit stays powered for at least 5 days. Using Lithium Ion AA batteries will provide power for 15 days or more.

Features

- Plastic battery holder pack with Female USB connector
- Ideally suited for use on our 576 and 1152 hour recorders (including landline models)
- Takes 4 x AA batteries – can be alkaline or lithium ion batteries (not supplied)
- Output voltage of battery pack with batteries within is 5 Volts (standard USB power)

Invisible Wireless Earpiece

This invisible earpiece is used to receive audio so that the wearer can listen to something in total discretion.

The earpiece itself is inserted into the wearers ear canal and is therefore almost invisible to the naked eye.

Product Code: EAR1

£179.00 (exc. VAT) £214.80 (inc. VAT)

The invisible earpiece is designed for discreet listening or covert operations where headphones or wired earphones would be inappropriate.

The earpiece itself is inserted into the wearers ear canal and is therefore almost invisible to the naked eye. This product is supplied together with an inductor that connects to the device that audio is transmitted from. The inductor comes in the form of a wire neck loop that can be hidden under clothing and plugged into the unit of your choice. We will always need to know, at the time of ordering, what connector is required to be attached to the neck loop (inductor). The battery life on the earpiece after a full charge is around 5 hours. Popular choices are radio receivers, mobile phones, MP3 Players and Digital Dictaphones. Prior to ordering please contact us at Spy Equipment UK to discuss your requirements. If you need to listen to audio playback from an MP3 or dictaphone without an obvious earpiece or if you need to hear radio transmissions in total discretion, then an invisible earpiece is the only way that you can do this. The product is perfect to give the wearer outside instructional assistance by radio transmission or maybe for a lecturer who uses a dictaphone to discreetly provide an audio reminder of a lengthy lecture.

Features

- In-ear wireless earpiece with incredibly small dimensions
- Designed to receive audio transmission from an inductor neck loop located in close proximity
- Tiny replaceable batteries in earpiece
- Operation run time with a fresh battery of approximately 5 hours
- Supplied with one earpiece, neck loop and battery ready to go
- Ideal for Private Investigators and Intelligence operatives or maybe Lecturers needing an aid for delivering a lengthy lecture

Mains Adapter for Digital Voice Recorder Pro

This is a UK mains power adapter for the Digital Voice Recorder Pro and landline recorder model, specifically to ensure that the recorder remains powered for long-term deployment.

Product Code: PLU6

£5.00 (exc. VAT) £6.00 (inc. VAT)

Pen Microphone

To the naked eye, this pen looks completely normal, but it conceals a sensitive built-in covert microphone. When attached to an audio recorder it can be used to make completely discreet recordings of conversations and meetings.

Product Code: PENM

£19.00 (exc. VAT) £22.80 (inc. VAT)

It really is not unusual to arrive at a meeting with a pen clipped into a top pocket of a shirt or jacket. This pen microphone is designed to be worn in this way and with a suitable recorder attached it becomes a discreet audio surveillance tool.

Non-Working Pen - Wired connector

Essentially the internals of a working pen have been removed and a wired microphone has been inserted to replace these, which of course renders the pen redundant as a writing implement, but still maintains its unobtrusive out shell. The wire from the microphone emerges from the hole where the pen nib would have normally been and at the end of this wire is a small jack plug to connect to an audio recorder.

Ideal for Recording Meetings

Although internal the microphone is fairly sensitive, it is still only best used to records sound and conversation in relatively close proximity of about 3 metres radius. So it is ideal for one-to-one or close-up conversations such as a meeting. It is important to have the pen on display to ensure the microphone is effective.

Audio Recorder Not Supplied as Standard

No special audio recorder is required for connection to the pen, but of course it is advisable that the unit is small enough to fit inside the pocket with the pen, so that it remains out of sight. If you do not have your own recorder already then we can supply an one if required (see voice recorders section for Voice Recorder Pro or Voice Recorder Ultimate).

Features

- Non-working pen with in-built microphone
- Designed to be clipped into a top pocket on a shirt or jacket
- Perfect for face to face audio recording
- Audio pick-up range of about 3 metres
- Requires connection to audio recorder to complete the recording system

Universal Telephone Recording Lead

This is effectively an earpiece that has a special microphone built into the earbud as opposed to a little speaker. This little accessory enables easy recording of phone calls when connected to a recorder.

Product Code: UTR1

£24.95 (exc. VAT) £29.94 (inc. VAT)

This neat little product allows you to discreetly record telephone calls that you make on both mobile and landline phones.

Use With Separate Audio Recorder

Simply plug the connector plug into a suitable recorder, place the earphone bud in your ear and put whatever phone earpiece you are using up to the same ear. You will still be able to hear perfectly what is being said, but you can choose to press record on an attached recorder (not supplied) to record both sides of the conversation. Choose when to start and stop the recording of what you are hearing and saying during the call.

Discreet Call Recording Operation

Using this device gives no indication to the person with whom you are speaking that you are recording the call and the beauty of this product is that it can be used when making calls on any phone providing a simple and effective way to protect your interests. Any easy product to carry around ready for use when you need it.

Consider Getting a Recorder

No special audio recorder is required for connection to the Universal Telephone Recording Lead, but of course it is advisable that the unit is small enough to easily carry around with you. If you do not have your own recorder already then we can supply an one if required (see voice recorders section for Voice Recorder Pro or Voice Recorder Ultimate).

Features

- Can be used when making calls on any phone landline or mobile
- Special microphone will pick up audio from both sides of conversation (what you are saying and what the caller is saying)
- Carry in your pocket for use anywhere
- Great for recording calls to protect your interests or to recording calls that you are receiving that may include harrassment
