RF Beacon Tracker	9

Asset trackers are used for tracking a massive variety of expensive assets whilst they are in transit.

### **Know Where Your Assets Are Going**

Whether it's for business or personal use, our extensive range of asset trackers help keep an eye on the location and movements of your asset. They can be deployed in different ways. Some are placed within a high-value commodity or in the packing in which it is contained. Asset trackers these days tend to use the same GPS tracking technology that is incorporated into vehicle tracking solutions. The difference is that they are generally required to be much more compact to enable deployment into situations where there is limited space. The compact nature of these devices means that they can be installed into a wider range of circumstances, but of course, the reduced size of these units also means that battery life to keep them active is much less than vehicle tracker units.

### **Protect Your Assets with Asset Tracking**

Asset trackers listed on our website have been used in many differing situations. Logistics companies have used them successfully to track high-value assets that are at risk of being stolen. Television companies have used Micro Trackers when making investigative programmes where certain commodities need to be tracked often across borders. Our asset trackers have also been used on many occasions by private investigators who have been required to investigate corporate theft and fraud. Whatever the circumstances, although there are limitations surrounding the deployment of GPS asset trackers, they can be used to great effect during the investigation of theft or for absolute peace of mind when moving a high-value asset from one place to another.

## Contact Pro RF Detector / Receiver

The Contact Pro is a digital radio frequency receiver designed to home in on and locate radio frequency transmitting beacons. This unit has 200 channels is designed for multiple beacons.

Product Code: RFD1

£349.00 (exc. VAT) £418.80 (inc. VAT)

The Contact Pro is a digital radio frequency receiver designed to home in on and locate radio frequency transmitting beacons. This unit has 200 channels is designed for use with multiple RF transmitting beacons.

### Home-in From a Distance

The unit is our preferred radio frequency detector for locating our RF beacon Trackers. From a distance of up to 0.5 km away the Contact Pro can be activated and switched on to the channel for the RF Beacon that the user wishes to locate. As the user move nearer to the RF beacon, the strength of the signal received by the Contact Pro increases. This allows the user to initially find the direction the RF Beacon is located until eventually the RF Beacon can be located down to a matter of centimetres.

### No Specialist Technical Knowledge Required

The Contact Pro has 200 channels which allows it to be used for receiving and locating multiple RF Beacons that are transmitting within the same area. The inbuilt LCD screen displays channel, device signal gain, etc. and there is an LED bar indicator that shows radio frequency signal pulse and the signal strength.

### Practice Required Before 'Live' Situation Use

Although the units themselves are fairly easy to control, there is an art to using the device effectively 'in the field', so it is advisable that operators of the unit engage in practice before using the product in a 'live' situation. After a few practice sessions the RF Wand is very easy to use.

### Features

- Professional robust RF receiver / locator for use with RF Tracking Beacons
- Frequency: 433 – 434 MHz (200 digital sub-channels within this range)
- Powered by 2 x LR6 (Alkaline 1.5V) batteries
- Running time of up to 20 hours
- Operating temperature: -25°C to +50°C
- LCD Display for channel, gain, tuning, etc.
- Built in speaker for audio confirmation

## GPS Defender - On Demand Tracker

\*To Scale

A compact versatile tracking unit that is ideal for short to medium term people and asset tracking. Controlled directly from your Smartphone with no tracking platform subscriptions required.

Product Code: GPS6

£177.00 (exc. VAT) £212.40 (inc. VAT)

The GPS Defender (On Demand Tracker) is designed for people and asset tracking. It is a portable and compact device that can be carried in the pocket, hidden in a bag, case, or luxury goods or even attached to expensive equipment for extra peace of mind.

### Control Directly From Smartphone

This tracker is designed and set up to be used to talk directly to your Smartphone by SMS. There are a number of ways that the tracking system can be used. Most customers purchase this unit because they do not have to log onto a tracking panel and can simply call the number of the SIM card that they put in the unit and receive an SMS location back. The SMS received contains a real-time link to a map that will, when clicked on, automatically display on the screen of the Smartphone.

### Receive Locations as Link in SMS

Other programmable functionality includes the ability to request the unit to send out regular locations to your Smartphone and the ability to request a location be automatically sent from the unit to your Smartphone when the device moves. It should be noted that each and every SMS location received will be at the standard cost for the network provider of the SIM that has been put into the GPS Defender unit. Some network providers will offer deals with large amounts of SMS messages included for a reasonable price which would help keep operating costs down.

### Efficient Design - Low Power Consumption

The GPS Defender uses the latest SiRF Star IV chipset, which has economic power usage, will ensure that users get the most from each battery charge. This fact ensures that the dimensions

### Features

- Neat and compact design ideal for tracking both assets and people / VIP's
- Easy to carry in the pocket, around the neck or to conceal in a bag, case or prized asset
- Fully rechargeable 1150mAh lithium ion battery – Operational: -20°C ~ +60°C
- Battery Consumption – up to 7 days life dependant upon how often a GPS location is demanded from the unit
- Latest SiRF Star IV (50 channel) GPS chipset technology with in-built high gain antenna
- In-Built Motion Sensor will automatically power down certain systems to conserve battery power when not moving for 5 minutes
- Control directly from your Smartphone – call the SIM in the unit and receive back a location map link by SMS
- Send SMS command to unit to set up automated regular locations to be sent to your smartphone...

Please note that more information available online.

## GPS Defender Asset / People Tracker

\*To Scale

This compact versatile tracking unit is perfect for short to medium term people and asset tracking. Linked to our dedicated tracking platform, the live and historic data can be accessed from any web-enabled device.

Product Code: GPS7

£239.00 (exc. VAT) £286.80 (inc. VAT)

The GPS Defender is designed for people and asset tracking. It is a portable and compact device that can be carried in the pocket, hidden in a bag, case, or luxury goods or even attached to expensive equipment for extra peace of mind.

### Ideal for Short to medium Term Asset Tracking

When it comes to asset tracking, the key factors are optimised operation and scheduled reports. The GPS Defender's unique timer design allows it to remain in deep-sleep mode all or most of the time (when stationary). It only sends location reports according to the pre-defined schedule, during periods when it is on-the-move, ensuring users get the most from each battery charge. This makes The GPS Defender excellent for short term asset tracking and as a personnel tracker. The compact design ensures that it is easy to carry on the person or maybe secrete in a bag, a case or within a package of some description.

### Motion Detection - Efficient Power Usage

Motion detection is a feature that is important when used in various scenarios, whether it be for the elderly or chronically ill or for keeping tabs on an asset, or vehicle maybe. This unit has an in-built motion sensor, which activates when the tracking device is moved setting off the process of sending out its location on a preset regular basis over the mobile phone data network to our dedicated online tracking platform at intervals as little as every 15 seconds.

### Low Cost EU Roaming SIM Card Available

The GPS Defender is suppl

### Features

- Neat and compact design ideal for tracking both assets and people / VIP's
- Real time tracking with 15 second live updates (or longer between if required)
- Easy to carry in the pocket, around the neck or to conceal in a bag, case or prized asset/li>
- Fully rechargeable 1150mAh lithium ion battery – Operational: -20°C ~ +60°C
- Battery Consumption – up to 4 days life or standby Time up to 1 month (2 to 3 hours movement per day)
- Latest SiRF Star IV (50 channel) GPS chipset technology with in-built high gain antenna
- On-Board Memory will store any lost location data even when the GPRS coverage is low
- In-Built Motion Sensor will automatically power down to conserve battery power when not in operation for 5 minutes...

Please note that more information available online.

## Lifetime Asset Tracker

The Lifetime asset tracker is a very long life GPS tracking device that is perfect as theft protection for vehicles and assets including Plant, Caravans, Static Homes, Trailers, Horse Boxes, Tractors, Boats and any other valuable movable objects

Product Code: GPS8

£219.00 (exc. VAT) £262.80 (inc. VAT)

The Lifetime Asset Tracker has been designed with extremely long deployment in mind. Ideal for all types of vehicle and movable structure, this tracking solution is exactly what the industry has been waiting for.

### **Trouble Free Lifetime Deployment**

Where there is a need to protect valuable assets from theft tracking is now the first consideration. What is needed is a solution that allows for a device to be secreted within the asset, with no requirement for charging of batteries and no concerns over SIM cards being deactivated by the network provider during the lifetime of the tracking device. The Lifetime Asset Tracker covers these two major factors, providing the perfect asset security solution.

### **Robust Enclosure for Changing Environments**

The incorporated battery can last up to 15 years! And because there is no need for charging or SIM card change the tracking device is completely sealed making it water and dust and shock proof. All this ensures that the tracker is robust enough to withstand the rigors of changing outdoor environments. The super-long battery life also means that this GPS tracker can over time be moved to monitor a number of different assets/objects.

### **Versatility By Design**

The long slim cylindrical design allows the device to be hidden within a variety of valuable assets including Plant machinery and equipment, caravans, trailers, horse boxes, tractors, boats, other vehicles and other moveable objects that have a high replacement cost. The tracking system will only give a location for the asset when it is stationary, so if

### **Features**

- Robust sealed design that is waterproof, dust and shockproof
- Tracking locations each and every time the asset tracker is stationary
- Long slender design allows it to be slotted in place within the structure of your asset
- Battery is totally enclosed, no charging necessary – Operational: -20°C ~ +60°C
- Battery Consumption – up to 15 years (up to 12 months if switched to 'live' mode)
- Latest SiRF Star IV (50 channel) GPS chipset technology with in-built high gain antenna for excellent accuracy
- Inbuilt Motion Sensor will automatically power down to conserve battery after static location is given
- Geo-Fencing will alert you via email the moment the unit leaves any user defined area...

Please note that more information available online.

## Micro Tracker

The NEW Micro Tracker is a superb addition to our range of GPS tracking devices. Much smaller than our previous version, it is perfectly suited for monitoring of vulnerable persons, packages, assets, bags and many other items.

Product Code: GPS4OLD

£152.00 (exc. VAT) £182.40 (inc. VAT)

The Micro Tracker truly compliments our range of GPS tracking devices adding a unit that is small yet versatile enough to be used in ways our other larger products cannot.

It is amazingly compact and can be hidden in many everyday things and is perfectly suited for tracking and monitoring of people, packages, assets, bags and many other items that would have previously been completely inconceivable!

### Worldwide Capability - Small and Powerful

This maybe one of the smallest trackers available, but that doesn't mean that it is lacking in capability in any way. Available in two colours (Black/white) at only 25 grammes the device is exceptionally light, but it features an omni-directional SiRF Star III GPS antenna and a Quad-Band GSM engine providing worldwide capability. Despite reporting its location every 20 seconds that it's on the move, the specialist battery saving electronics ensure that the unit is capable of up to 3 days operational deployment time, with normal usage, which is exceptional considering its size.

### Track the Micro Tracker via Phone or Web App

When deployed the Micro Tracker is set to report back its location every 20 seconds that it is on-the-move, albeit a built-in movement sensor will shut down reporting when the device has been stationary for 5 minutes. Included Web and Smartphones apps p

### Features

- Simple to use tiny tracker – control using your mobile phone or through computer app
- Ideal for asset / package / person tracking, maybe vulnerable persons or the elderly
- Incredibly small: 38 x 38 x 14mm – Only 22 grammes in weight
- Tracks via GPS, LBS and WiFi – GPS antenna: omni-direction helix type – SiRF Star III
- Quad-Band GSM engine – 850/900/1800/1900MHz meaning that it can be used in any country worldwide
- Powered by an internal rechargeable 450mAH Li-on battery – charger lead supplied
- Good operational battery life – Up to 3 days under normal usage
- Battery status shown on-screen in app and low battery alert sent to as an alarm notification in-app
- Swift battery recharge time: approximately 3 hours...

Please note that more information available online.

## RF Beacon Tracker

The RF Beacon Tracker is the ideal asset tracking solution that is ideally used in conjunction with one of our GPS devices. The device is designed to transmit every second and can be located down to a matter of centimetres.

Product Code: RFB1

£155.00 (exc. VAT) £186.00 (inc. VAT)

Although the RF Beacon Tracker can be used on its own, its range is limited and this is why its preferred deployment is as a more accurate tracking back up for one of our GPS devices.

### Rechargeable Long-term Battery Life

The RF Beacon Tracker is relatively small in size and is powered from an internal rechargeable lithium ion battery. After a full charge, a deployment time of up to 10 days is achievable, easily long enough to enable recovery of an asset.

### Accurate and Frequent Transmissions

The RF Tracker is designed to transmit every second and can be located within a matter of centimetres. It can be supplied with or without the magnet dependent upon customer preference and can be programmed to any one of 200 transmission frequencies which enables numerous devices to be used within the same area. The maximum transmission distance is approximately 1Km 'line-of-sight', although in a built up area maximum transmission distances of around 400 metres.

### Locate Tracker inside Building or Metal Structure

The RF Tracker can be concealed within a package or maybe attached to a crate. Normally a GPS tracking device attached to a vehicle will enable tracking of a package or crate in transit, but more often than not, identifying an exact package or crate after it has been removed from the vehicle and taken into a premises can be quite difficult to achieve. The RF Tracker not only enables the item to be tracked into the building in which it is located, but more precisely it can be located within the building even if it has been hidden away. An RF wand is required in order to locate the device (please see Contact Pro RF Detector in this section).

### Features

- Battery-powered self-contained unit
- Supplied with or without attached magnet (17Kg pull)
- Internal rechargeable lithium ion 3.7v 920mAh battery
- Deployment time of 7 to 10 days after a full charge
- Dimensions: 73 x 40.5 x 24mm
- Supplied with Mascot 2240 wall charger
