One of the main complaints from past and potential customers about GSM bugs is/has been the fact that although these devices provide a great listening in capability, they do not provide the facility to be able to record what is being heard.

Listen and Record What's Going On

There has been a solution to this problem for many years and although not ideal, it does enable listening in and selectively recording what is heard both at the same time. Here at Spy Equipment UK we quickly realised that rather than expecting customers to work out what was required to achieve a GSM bug solution, we dedicated a section on our website to lend a helping hand. We have combined the three elements you will need to listen in to your home or office - from any phone, anywhere in the world, while taking high quality recordings which can be replayed directly or downloaded to your PC. Please note this is a discreet solution, both the GSM Bugs and the recording equipment are designed for subtle applications. Here's what you get: [GSM Bug](#) Select one of our packages to include the GSM Bug of your choice [Mobile Telephone Recording Leading](#) This will enable you to discreetly record what you are hearing from your GSM Bug. Dial in from any phone, place the recording lead earpiece in your ear and record onto the digital recorder what you are hearing. [The Digital Voice Recorder](#) High quality 16 hour (Voice Activated) Digital Voice Recorder, complete with software and USB connection for your PC. When using all three items of the package together you will be able to record 'live' phone conversation, and as a result get 'hard copy' proof of what was said in the vicinity of the GSM Bug. Watch this section because Spy Equipment UK are soon to launch an even simpler GSM recording package that makes use of an existing phone with specialised software to enable normal listening and high quality recording onto the phone itself.

4/6 Gang GSM Recording Package

This package has been put together to give you everything you need to listen in anytime, from anywhere in the world and get proof of everything you are hearing.

Product Code: GAPK

£305.00 (exc. VAT) £366.00 (inc. VAT)

This package has been put together to give you everything you need to listen in anytime, from anywhere in the world and get proof of everything you are hearing. Includes:

4/6 Gang PlugBug The GSM 4/6 Gang PlugBug can be simply plugged into any mains socket available to remain permanently powered, ready for dial in anytime, anywhere. The SIM card concealed within the unit can be dialled to activate the GSM module, this allows you to listen to the surroundings of the unit for up to a 8 metre (25ft) radius. **Please see 4/6 Gang PlugBug for full details.** **Bluetooth Call Recorder** This is a superb versatile recorder that can be used as either a dedicated mobile phone call recorder or as a stand-alone room recorder with a super-sharp sensitive microphone. With bluetooth link up, there is no need for a physical connection between the recorder and the mobile phone that you are recording from. With a large in-built recording memory, it is easy to record clearly what you hear when listening in to the GSM Bug. Supplied with USB lead for easy playback and transfer via a computer. **Please see Bluetooth Call Recorder for full details.**
