Since the advent of the digital mobile network the popular held belief has been that digital communications are really secure and not open to phone-tapping.

Ensuring Privacy

However, this couldn't really be farther from the truth because with minimal knowledge it really is very easy to breach the security of the digital mobile network communications. This being the case, it is not hard to imagine how easy it would be for an individual or a team with the right knowledge and experience in security over-rides to render a targeted individual almost defenceless. If you are the type of person who really values secure communications then in this section of the Spy Equipment UK website you will find devices and software to ensure that you are in the position to repel unwanted eavesdropping. We have handsets that will notify you if a third party is attempting to intercept your communications and also renders your calls and SMS messages secure. We also have a reasonably-priced encryption software solution for Nokia S60 handsets. We do not sell Gold-Lock software. Our encryption software is certified and passed by the leading authority of Cryptography at the University of Bar-Ilan, Israel - and is the perfect choice for politicians, lawyers, executives, police and government personnel, in fact anyone who recognises the need for complete secure communication.

Bluetooth Covert Earpiece

The Bluetooth Covert Earpiece is designed to discreetly sit inside the ear and enable the wearer to hear and speak to someone remotely and discreetly when connected to a Bluetooth enabled mobile phone. Designed for covert two-way communication and remote surveillance.

Product Code: 8EAR

£149.00 (exc. VAT) £178.80 (inc. VAT)

Used by surveillance professionals, lecturers and sometimes actors for live performances, the Covert Bluetooth Earpiece is the ideal solution where the user needs to discreetly listen to audio or engage in discreet two way communication, but where earphones or a headset would be inappropriate. This new version is built around Jabra and Plantronics technology ensuring superior quality.

Tiny Discrete Surveillance Earpiece - Two-Way Communication

The tiny earpiece is effectively a wireless earphone (earbud) speaker that is very small and can be inserted into the wearer's ear canal so even when viewed from the side, there will be no visible sign that the surveillance earpiece is in use. The bluetooth dongle has an what is called an induction neck loop that can transmit the audio received into the bluetooth dongle to the earpiece wirelessly (very short distance transmission). This model has an upgraded Plantronics transmitter providing much superior and more consistent audio and not to be confused with cheaper available solutions. The bluetooth unit has an inbuilt microphone enabling two-way communication and completely covert surveillance of a subject or situation.

Bluetooth Pairing with this Covert Surveillance Device

This device is part of our secure communications set of products, under the counter surveillance range. The compact Bluetooth Dongle can be paired using bluetooth radio frequency to another bluetooth audio device, such as a mobile phone which would either need to be carried on the person or be within bluetooth range. Pairing is a simple ope

Features

- Covert wireless earphone small enough to be completely hidden from view based on Jabra/Plantronics technology
- Set up to receive transmitted audio from an inductor neck loop positioned in close proximity
- Powered from a tiny replaceable battery inside the earpiece itself (2 supplied)
- Realistic operating time for earpiece battery of around 5 hours
- Batteries commonly available from many high street retailers and online
- Compact bluetooth dongle connected to neck loop can pair with different bluetooth audio devices
- Dongle is powered by internal lithium rechargeable battery providing over 5 hours operation time
- Dongle has superior high gain microphone for crisp audio
- Supplied with one earpiece, miniature cell battery, bluetooth neck loop, charge cable and magnet
- Perfect for Private Investigators, Intelligence Operatives, lecturers and maybe even actors undertaking live performances

Please note that more information available online.

Invisible Wireless Earpiece

This invisible earpiece designed so that the wearer can listen to something in total discretion. The earpiece itself is inserted into the wearers ear canal and is therefore almost invisible. Ideal for use with mobile phone or audio players - Not bluetooth - receiver requires direct connection (hidden under clothing)

Product Code: EAR1

£120.00 (exc. VAT) £144.00 (inc. VAT)

The invisible earpiece is designed for discreet listening or covert operations where headphones or wired earphones would be inappropriate. It is ideal for facilitating secure communications, enabling you to make discreet mobile phone calls or listen to recorded speech/music without attracting attention.

Discreet Phone Calling or Listening to Audio

The earpiece itself is inserted into the wearers ear canal and is therefore almost invisible to the naked eye. This product is supplied together with an inductor (neck loop worn under clothing) that connects to the device that audio is being ported through or played from through a connecting wire. The proximity of the neck loop to the earpiece (inside the ear) allows wireless transmission from neck loop to earpiece and vice versa without a physical connection being needed. The induction loop has a 38dB gain microphone that allows for two-way audio communication, making this the perfect recorder accessory.

Reliability of Wired Connection to Audio Device/Phone

The inductor wire neck loop has a wired connection and is supplied as standard with a 3.5mm jack plug connector, which is fairly universal for many devices including mobile phones, MP3 players and other audio playing devices. It will best to know at the time of ordering, what jack plug connector you require for the device that you intend to use. There are some devices that use a 2.5mm audio connection, albeit these are more rare and if this is the case, then it is a good idea to check the availability of a converter plug to ensure successful use

Features

- In-ear wireless earpiece with incredibly small dimensions
- Designed to wirelessly receive audio transmission from an inductor neck loop located in close proximity (worn under clothing around neck)
- Neck loop with 38dB gain microphone for two way communication
- Tiny replaceable batteries in earpiece – one supplied with unit
- Earpiece operation run time with a fresh battery of approximately 5 hours
- Neck loop with rechargeable 230mAh internal battery (4 hours use on full charge)
- Wired connection to mobile phone, MP3 or other audio device (standard 3.5mm jack plug connector)
- Supplied with one earpiece, neck loop, charge wire and earpiece battery ready to go
- Ideal for Private Investigators and Intelligence operatives or maybe Lecturers needing an aid for delivering a lengthy lecture

Please note that more information available online.

Telephone/Fax Tap Defeat

This telephone/fax tap defeat that will defeat most wiretaps or bugs that could be attached to your phone line meaning that you can be confident that your confidential conversations are not being listened to.

Product Code: TEL7

£109.00 (exc. VAT) £130.80 (inc. VAT)

Although most people are concerned about someone listening into their mobile phone conversations, landline telephones are still open to eavesdropping. The Telephone Tap/Fax defeat is designed to combat this type of intrusion.

Wired Phone Systems Open to Abuse

Standard telephone lines are still fairly easy to bug (commonly known as phone 'tapping'). The fact that the signal has to pass through a wired system usually inside and outside a premises before being unreachable to the average person leaves open the possibility of a wiretap or phone bug being attached. Some telephone tap systems do not even require cutting into the external wire insulation.

Starves Limpet Bugs and Recorders of Power

The Telephone/Fax Tap Defeat will help to ensure that any bugs attached to the line can be prevented from doing their job by starving them of power. Many bugs leach power from the line that they are 'tapping' to power themselves. Only a certain amount of power is required to actually make an audio call down the line. This product allows the user to reduce the power draw on the line to a value that will only allow a normal audio conversation. This means there is no capacity left to power the leaching 'wiretap', thereby rendering it useless.

Simple to Setup and Deploy

Setting up is a matter of a few minutes. Simply plug the unit into any BT socket on your line, (it doesn't necessarily have to be the one you're using) and the device will assist in rendering your conversations safe. By moving the switch on the unit from 'safe' to 'unsafe' position you can control whether to have any attached offending device on or off. This means you can use the wiretap against itself by divulging misl

Features

- Landline ant-bugging device designed for standard single phone lines
- Turn on or off any wiretap or bug or any phone recorder controlled by line voltage
- Switch between safe and unsafe mode to give false call recording
- Very simple to set up and use
- LED indication lights to denote safe and unsafe modes

Please note that more information available online.
