

Infinity Spyphone

This Nokia phone looks like it is switched off, but it has been modified and can be called without showing any indication that it is active. This modification means that the spy phone becomes a room or car bug.

Product Code: INF1

£201.00 (exc. VAT) £241.20 (inc. VAT)

Spy phones are adapted classic style Nokia phone handsets that have been modified to turn them into room bugs, like the Infinity Spyphone. They were the first type of GSM bug and still remain favourites for some of our customers because they simply look like a phone where the battery has expired or an old handset that does not function any more.

Adapted to Give Appearance of a Dead Phone

All standard features on the spy phone have been switched off through the software so that the screen does not come on and the buttons do not light up or respond in any way. The call receive function, however, is still maintained so that the spy phone is able to receive and auto-answer an incoming call. When the call is answered, the microphone is switched on and the caller is able to listen in to the surrounding environment.

Enhanced Microphone Sensitivity

Some spy phones use the standard microphone of the handset and as such the listening radius of the microphone is normally limited. This is because standard mobile phone microphones are designed to filter out background noise and only be sensitive enough for someone to speak directly into the phone. Because the Infinity Spy Phone is not used to make 'normal' calls, we have enhanced microphone sensitivity and the result is a audio pick up radius of at least 8 metres.

Innocuous Short Term Listening Device

The Infinity Spy Phone is the perfect room bug for an office type scenario where the phone could be left on a desk or maybe on top of a cupboard. In the car it maybe that the spy phone could be left in a back of seat pocket or under a seat. Whatever the requirement, a four day standby time and/or a

Features

- GSM type listening device made from adapted mobile phone
- No standard mobile phone capability – screen and buttons have all been disabled
- Auto-answering GSM engine – enhanced microphone technology
- Excellent listening radius of up to 8 metres for normal speech
- Dual band network coverage 900/1800MHz – works in UK and most of the EU countries
- 5 hours of listening in time and/or 4 days standby time
- In original boxed with charger and Orange or Virgin SIM card
- Works on other phone networks although audio quality is less clear
- Optional external microphone for varied deployment possibilities (see package options)

Please note that more information available online.
