

GPS Avenger Tracker

Made by Spy Equipment UK - The GPS Avenger is the latest addition to our magnetic vehicle trackers that uses a dedicated tracking platform website. This superb unit provides comprehensive 'live' and historical tracking functionality with no need for specialist software makes it accessible from all web-connected Smartphones, Tablets and Desktop computers. A professional, but easy to use surveillance tracking device.

Product Code: GPS1

£269.00 (exc. VAT) £322.80 (inc. VAT)

The GPS Avenger is an excellent magnetically deployable vehicle tracker that couples superbly put together GPS tracker hardware together with a robust tracking website with secure access available from any web-connected device. This GPS Avenger is the ideal choice for customers who want a professional and feature-rich piece of tracking technology.

Both GPS and Cell Tracking Provided

The majority of available GPS tracking devices obtain accurate updated locations from GPS satellites orbiting and beaming down global positioning signals to the Earth surface. As a general rule this is a more than satisfactory method to keep a track of vehicles, plant, machinery and other moveable structures. However, GPS can sometimes fail especially when the tracked asset does not have a direct view of the sky, for example when a vehicle enters a multi-storey car park or plant/machinery is put into covered transport. What makes our tracking devices different is that they have cell location tracking technology to back up the advanced GPS system. If GPS transmission is not available, but the device still has a mobile phone signal, then a location (in the form of a location circle) can be displayed on the tracking console map within which the unit will be positioned. As soon as the GPS Avenger can lock onto the GPS signals again, then the more accurate pin-point location icon will again replace the cell location based circle.

Water Resistant Case - Super Strong Magnets

The tracking technology is fully protected, sealed within a tough water and dust resistant case that is designed to shield the internal electronics from environments such as the underside of a vehicle in all weather. To keep the casing completely weathe

Features

- Magnetic vehicle and asset tracker that is easy to deploy and monitor. Made for professionals, but usable by anybody with a computer, tablet or smartphone
- Real time GPS tracking with 15 second live location updates (or longer between if required)
- Cell location tracking ability serves as a backup if device loses GPS (When going into a tunnel or underground carpark, but where mobile phone signal still exists)
- Completely weatherproof sealed casing – ideal for under vehicle deployment capability
- No on/off switch ensures that device will not be accidentally switched off when deployed
- Internal fully rechargeable 5200mAh Lithium battery – In-Built Motion Sensor will automatically power down to conserve battery power when not in operation for 5 minutes...
