

Photo Frame Camera

Made by Spy Equipment UK - The Photo Frame Camera is a self-contained high definition with DVR cleverly concealed behind the selected picture, within a glass-fronted picture frame that would not look out of place in any living room or on an office desktop. Covert room video surveillance at its best!

Product Code: PF5C

£205.00 (exc. VAT) £246.00 (inc. VAT)

Even in the modern world a favourite or special picture in a frame on a desk or on the side in a living room or maybe bedroom certainly does not seem out of place. The Photo Frame Camera was conceived with this in mind providing an everyday object in which hide a camera 'in plain sight' without arousing suspicion.

Photo Frame Camera - Exceptionally Covert Design

Just like our hidden audio recorders, covert camera systems are designed to be discreet, but in the case of the Photo Frame Camera, locating the camera, that is positioned in a dark area of the picture is almost impossible even under the closest of scrutiny. With the camera naturally viewing out of the front face of the picture frame through the glass, it is the ideal room surveillance device, which means that the product is able to neatly fit into many room environments without attracting any suspicion.

Multiple Recording and Memory Option

This camera system produces high quality, 720p HD video with audio and time/date stamping on the recorded footage, which is quite often crucial for evidential reasons. Although it is pre-programmed in through-the-lens motion activated mode, the unit can be easily setup to, scheduled and timed recording if required. The recording system also has an overwrite function for continuous recording with memory storage capacities of 32GB as standard or 64/128GB as a paid upgrade at time of purchase if required.

Battery Powered - Extended Recording Capability

The rechargeable batteries are sandwiched between the image and the back cover, so concealed from view. When fully charged the system has a straight recording time of up to 30 hours, ho

Features

- Cleverly concealed spy camera system incorporated within a photo frame
- Made in the UK. Engineered with covert deployment in mind – Camera lens is effectively impossible to identify
- Simple to use – 'plug and play' technology with no specialist knowledge required
- Primarily set for 'thru the lens' motion activated video (with audio) recording (alternative setup made easy through included software widget)
- Video Resolution: 1280x 720p @ 20 Frames per second
- Will record in colour perfectly in daylight, but has auto-switching to night mode for when the lighting gets very dim in the area of deployment (changes to black/white)
- Excellent quality CMOS pinhole lens – decent wide camera view angle: of 62 degrees...
